

# The title of your poster

**Your Name**

Your Lab,  
Your School  
you@mail

## Abstract

**Y**OUR abstract, if you wish: put here your abstract to have it shown under an unnumbered section called **Abstract**.

## 1. The first section: in a box

**S**OME text to appear under the box containing the name of the section. This is a 3-column document. You can change the number of the columns some lines above, in the *multicols* environment.

## 2. The Second Section

**S**TILL some text, and let's have a reference: [1], which will appear below outside the multicolumns. Maybe you

want it to appear in a column? Just move the text before the end of the multicols environment.

## 3. How to compile the poster

**M**AKE sure you have both `a0size.sty` and `sciposter.cls` in your tex path or in the current directory, then run `pdflatex` on this file. Voilà.

## References

[1] An Author *A reference*. A paper.
